TIPTAP

overview

TipTap is a portable wireless device tailored for pre-set denomination; it is compatible with major financial institutions such as MasterCard, Visa, and Interact. Its wireless nature, simple setup and small size make it ideal for charities, fundraisers and any business or venture involving a small fixed amount. It works as a standalone point-of-sale device created to provide faster, simpler and more affordable payment solutions for everyone.

our contribution

NeuronicWorks was tasked to develop the industrial design, hardware, and firmware of the project. We modified and redesigned the unit, from its prototype phase, for production and usability. From enclosure, light pipe, lanyard mount, and clips, to hardware design, layout and manufacturing, NeuronicWorks worked closely with the client to make sure the final design was production and market-ready.
